# Long-term urological outcome of men born with hypospadias

Department of Urology, University Hospital Ghent, Belgium

UZ UZ GENT

# INTRODUCTION External genital reconstruction is challenging Voiding function in childhood → sexual function in adulthood Pubertal growth Sexual and reproductive functions → effect on adult life Complications can arise many years after surgery

Focus on cosmesis, psychosocial and functional outcome

## Introduction

More than 300 techniques described for reconstruction

No good prospective or controlled trials

No good tools to judge cosmesis

No guidelines on how to measure psychosexual and psychosocial outcomes

UZ UZ GENT

### Introduction

Which outcomes are important on long term?

Voiding function (strictures, fistulae, diverticulae)

Cosmesis (scars, skin distribution)

Sexual function (erection, ejaculation, curvature, sensitivity)

GHENT UNIVERSITY

### Introduction

Spraying (NR -63 %)

Post void dribbling (NR -30 %)

Stream deviation (NR – 26%)

LUTS (NR -20 %)

Severe LUTS (NR- 4 %)

Fistulae (0% - 25 %)

Strictures (0% - 8 %)

Uroflow Qmax < 95th percentile (NR- 3,7% -14,7%)

U74 UZ GENT

### **PARTICIPANTS**

Hypospadias	N= 192
Distal	132/192 (68,8%)
Midshaft	37/192 (19,3%)
Proximal	23/192 (12,0%)
Complex	20/192 (10,4%)
Controls	N=50
